Arabtec Design System & Build Playbook

Version 1.0 — August 2026

This is the single source of truth for building and enhancing Arabtec internal web applications (Employee Portal, HR Leave, Recruitment Analytics, and future modules). Any agent — human or AI, advanced or basic — must read this document before creating or changing UI, and must pass the Definition of Done checklist in Section 9 before declaring work finished.

The reference target is the Arabtec Employee Internal Dashboard: red-and-white corporate identity, dense white cards on a light neutral canvas, strong black headings, and a calm, information-first layout.

1. Brand Foundations

1.1 Colour

Arabtec is a **red-accent, neutral-canvas** brand. Red is used for identity, primary actions, and emphasis only — never as a large background fill behind body content.

Role	Light value	Usage
Brand red (primary)	oklch(0.55 0.216 27.5) ≈ #D8232A	Logo, primary buttons, active nav underline, accent rules, the heading dot
Brand red hover	oklch(0.49 0.20 27.5)	Primary button hover/pressed
Red soft	oklch(0.96 0.02 27.5)	Icon tile backgrounds, subtle highlight rows
Ink (foreground)	oklch(0.18 0.01 260) ≈ #16181D	Headings, primary text
Body text	oklch(0.42 0.01 260)	Paragraphs, descriptions

Design extraction notes

- Preserve the red-and-white corporate identity; use black/ink for hierarchy and a light-neutral canvas.
- Treat red as the primary brand/action accent. Do not introduce green as a generic primary action colour; reserve green for confirmed success states.
- Reuse the strong black headings, thin red rules, dense white cards, subtle borders, and calm supporting copy shown in the references.
- Maintain mobile-first responsive behaviour and at least 44×44 px interactive targets.
- Do not copy checkerboard pixels into production artwork; use the true transparent SVG/PNG masters.
